CAS number 80573-04-2

ATC code A07EC04

PubChem 5362070

DrugBank APRD00141

Molecular Weight: 437.32

Mol. mass 357.318 g/mol.

Balsalazide disodium is a stable, odorless orange to yellow microcrystalline powder. It is freely soluble in water and isotonic saline, sparingly soluble in methanol and ethanol, and practically insoluble in all other organic solvents.

DOSAGE

Take this medication exactly as it was prescribed for you. Do not take the medication in larger amounts, or take it for longer than recommended by your doctor. Follow the directions on your prescription label. Take this medicine with a full glass of water.

Balsalazide can be taken with or without food.

Balsalazide is for short-term use only. Do not take this medication for longer than 12 weeks unless your doctor has told you to.

Tell your doctor if your symptoms get worse after you start taking balsalazide. Store balsalazide at room temperature away from moisture and heat.

SIDE EFFECTS

Get emergency medical help if you have any of these signs of an allergic reaction: hives; difficulty breathing; swelling of your face, lips, tongue, or throat. Stop using balsalazide and call your doctor at once if you have any of these serious side effects:

- *worsening colitis symptoms, such as fever, stomach pain, cramps, or bloody diarrhea;
- *bleeding from your rectum; or
- *pale skin, easy bruising, weakness.

Keep taking balsalazide and talk to your doctor if you have any of these less serious side effects:

- *headache, sleep problems (insomnia);
- *nausea, vomiting, stomach pain, diarrhea;
- *runny nose, cold symptoms; or
- *joint pain.

PRECAUTIONS

Take the missed dose as soon as you remember. If it is almost time for your next dose, skip the missed dose and take the medicine at your next regularly scheduled time. Do not take extra medicine to make up the missed dose.

What happens if I overdose?

Seek emergency medical attention if you think you have used too much of this medicine. Symptoms of a balsalazide overdose are not known.

What should I avoid while taking balsalazide

There are no restrictions on foods, beverages, or activities during therapy with balsalazide unless your doctor directs otherwise.

DRUG DESCRIPTION

Balsalazide is an anti-inflammatory drug used in the treatment of inflammatory bowel disease. It is usually administered as the disodium salt.

Balsalazide disodium is a stable, odorless orange to yellow microcrystalline powder. It is freely soluble in water and isotonic saline, sparingly soluble in methanol and ethanol, and practically insoluble in all other organic solvents.

Inactive Ingredients: Each hard gelatin capsule contains colloidal silicon dioxide and magnesium stearate. The sodium content of each capsule is approximately 86 mg.

Balsalazide reduces the actions of chemicals in the body that cause inflammation in the colon (bowel).

Balsalazide is used to treat active ulcerative colitis.

Balsalazide may also be used for purposes other than those listed in this medication guide.

Note /Government Notification: These chemicals are designated as those that are used in the manufacture of the controlled substances and are important to the manufacture of the substances. For any (Control Substance) products Import and Export *** subjected to your country government laws /control substance ACT.

Information: The information on this web page is provided to help you to work safely, but it is intended to be an overview of hazards, not a replacement for a full Material Safety Data Sheet (MSDS). MSDS forms can be downloaded from the web sites of many chemical suppliers. Also that the information on the PTCL Safety web site, where this page was hosted, has been copied onto many other sites, often without permission.
